PROFESSIONAL SUMMARY

Statistics student at Universidad Nacional Mayor de San Marcos (UNMSM), focused on Data Science, Machine Learning and MLOps. I start by understanding the business problem, then build data-driven solutions end to end: analysis, modeling, deployment, monitoring and continuous improvement. I have built end-to-end projects across credit risk, epidemiological early warning, and AI-powered job matching, combining statistics, ML and engineering to design systems meant to be used and measured in production, not just experimental models. Seeking an internship in Data Science, Machine Learning or Analytics where I can contribute a quantitative, problem-solving perspective.

WORK EXPERIENCE

Founder & CEO — RealML
Mar 2026 – Present · Lima, Peru (Remote)

- Founded and lead RealML, a personal applied ML research initiative building data-driven products for real business and operations problems, combining statistical modeling, MLOps and generative AI.
- Built and publicly documented on GitHub three end-to-end platforms (credit risk, malaria early warning, and AI-powered job matching), each with a reproducible pipeline, API and production monitoring.

Warehouse Manager — Mebol (Food Industry)
2023 – 2024 (1 year) · Lima, Peru

- Managed inventory control using Excel and SQL, implementing structured tracking tables that improved data traceability.

Human Resources Assistant — Municipalidad
2024 (3 months) · Áncash, Peru

- Processed and organized personnel data (payroll, attendance, administrative records) in Excel, coordinating with internal areas and ensuring confidentiality of institutional information.

EDUCATION

Bachelor's Degree in Statistics — Universidad Nacional Mayor de San Marcos (UNMSM)
May 2022 – Dec 2027 · Lima, Peru

- Top third of the Statistics undergraduate program. PRONABEC Scholar (2024) for outstanding academic performance.

CERTIFICATIONS

Machine Learning Specialization – DeepLearning.AI & Stanford University	Apr 2026
SQL for Data Science – University of California, Davis	Aug 2026
Building with Artificial Intelligence – Saylor Academy	Jul 2026
Python Essentials for MLOps – Duke University	Jun 2026
Programming for Everybody (Getting Started with Python) – University of Michigan	Mar 2026

SKILLS

Languages & Tools: Python, R, SQL, Advanced Excel, Git/GitHub

AI & Data: pandas, NumPy, scikit-learn, feature engineering, exploratory data analysis

Machine Learning & MLOps: XGBoost, LightGBM, CatBoost, Optuna, MLflow, SHAP, FastAPI, Docker, GitHub Actions (CI/CD), drift monitoring (PSI, Evidently)

Tools & Cloud: Power BI, Prefect, PostgreSQL, Google ADK, Vertex AI (Gemini), AWS (learning in progress)

Soft Skills: analytical thinking, communicating results to non-technical audiences, autonomy and continuous learning

PROJECTS

Credit Risk ML Platform — GitHub · Demo
End-to-end credit risk assessment platform: benchmark of 4 algorithms (Logistic Regression, XGBoost, LightGBM, CatBoost), FastAPI API, Streamlit demo, drift monitoring (PSI) and automatic retraining via GitHub Actions CI/CD.

Peru Malaria Early Warning Platform — GitHub
Machine Learning platform to forecast malaria incidence by district and epidemiological week in Peru and flag outbreak risk: temporal feature engineering, LightGBM + Optuna, walk-forward validation, drift monitoring with Evidently, and an automatic retraining policy.

Rumbo — GitHub · Demo · Video
AI-powered job-matching platform built on a multi-agent system (Gemini via Vertex AI and Google ADK): responsible for agent design, requirements extraction and candidate-role fit scoring; deployed on Google Cloud Run.
